DownloadQ: How do i ensure the database is not erased when upgrading using android studio I am using android studio and I am still building the version of my app that is for android 2.3.1. Whenever I build the app I see this and I want to know how to prevent it from happening. A: Sometimes the database on older devices is reset to zero at every installation. You can check if the database is empty using

```
SQLiteDatabase.query("select * from User where id=1", null, null, null, null). If the result is empty, the database is probably deleted. There are two ways to prevent it: if (check for "empty" results) if (create an empty database) 1. check if the database is empty If the database is empty, there is no need to create a new one. You can check for "empty" results using the method below: // Check if the database is empty Cursor cursor = db.query("SELECT * FROM User where id=1", null, null, null, null, null, "User"); if (cursor!= null) { if (cursor.getCount() == 0) { db.close(); return; } } 2.
```

create an empty database If the database is empty, you should create an empty database. Create a new empty database like this: SQLiteDatabase db = null; try { db = SQLiteDatabase.openDatabase("my_db_file", null,

```
SQLiteDatabase.CREATE_IF_NECESSARY); } catch (Exception e) {
```

More details available at [In this video I demonstrate the methods of hiding data in plain sight using the magic of custom DIP switches. We'll use some simple switches, such as rotary controls and push buttons, to hide all sorts of data. I made this video with the YouTube Studio - it's a powerful tool that allows you to make online videos for free. I will also demonstrate the most used DIP switch designs. I hope you enjoyed watching this video. The DIP Switch designs are available at: \[On the link above, you can read the information of each product and view the same 3D model as in this video. You can read the component characteristics and wire a physical board. I hope you enjoyed watching this video. Please click "like" and share it with your friends! The DIP Switch design files and the schematic diagram are available for free. They are made available on the condition that you not reproduce and re-distribute them for commercial use. The schematics are available on a print-to-scale format and can be used as a template to order the actual boards from the factory. If you have any problems or have suggestions to make about the design, please feel free to contact me. Thank you for watching! What is the mechanism behind AES encryption? Where does encryption reside? - Computer Security - In the previous video, we got some information about the Chuffed Data Encryption Algorithm\\(CDEA\\). But how does it work? What is the mechanism behind it? - Information Security - In this video, we will dive deep into the mechanism behind AES encryption. What it means to be an Encryption Algorithm? A helper tool to view and extract encrypted file information. Must be run from an administrator command prompt. Notes: Tries to connect to a Windows 98 machine over the network. Must be run from an administrator command prompt. The encryption for the files on this machine is partially decrypted, and the information that can be extracted is limited. Will only work if the local Administrator has the proper encryption keys for the files. If you run this program on a network share, the network share must have local administrator access (either administrator or read access). Uses encryption values from the registry. Supported Platforms: - Windows 2000, Windows XP, Windows 2003, Windows 2003 Server, Windows Vista, Windows Server 2008, Windows Server 2008 R2 - Windows Server 2012, Windows Server 2012 R2 - BSD Unix (FreeBSD, NetBSD, OpenBSD, DragonFly) - HP-UX - Mac OS X - BeOS, OpenBeOS, AmigaOS, MorphOS, ConvexOS - POSIX Example: scanner.exe -filepath C:\foo.abc -encrypted References: java.io.File java.io.FileOutputStream java.io.FileReader java.io.BufferedReader java.io.InputStreamReader java.io.File java.util.zip.ZipInputStream java.util.zip.ZipEntry java.util.zip.ZipInputStream java.util.zip.ZipEntry java.util.zip.ZipFile java.util.zip.ZipEntry java.util.zip.ZipOutputStream java.util.jar.JarEntry java.util.jar.JarFile java.util.jar.JarOutputStream java.util.jar.JarEntry java.util.jar.JarOutputStream java.util.jar.JarEntry java.util.jar.JarURLConnection java.io.DataInputStream java.io.BufferedInputStream java.io.InputStream java.io.InputStreamReader java.io.BufferedReader java.io.
