the biggest moments that I have as a musician. Those moments I will never forget. But I also truly feel that the Golden Era is over for me. I guess I am in between eras. And I enjoy most eras. I hope to have as many years as possible remaining in this business. But there will come a time when I will be unable to do what I love to do. Thank you for being a part of my life, this business, and for listening to my music. I hope you enjoy the rest of the tour. Daniel Milwaukee, WI 4/28/2012 Arrangement is cool – but I know what's really cool: seeing the artist live. If you get a chance to do that, I urge you to go. All that Dan has talked about – the therapy, the way he feels with the audience – it's kind of magical. You're like a big, gentle bear, taking care of others. I know that it's a long trek to places like Florida or Texas, where we are set up for no sleep, but I promise you, it's worth it. Dan is a genius, a first-class artist, and worth every bit of the journey. You'll be proud to spend time with him. He is great, true, and he has a huge audience, but all the people I've met on tour with him – even people who aren't into hard rock – always seem to agree that he is the best. Dan is the finest human being on Earth. He is a man of heart and soul. He is a poet and a traveler of the soul. He is a true friend. This was a gripping and meaningful show, and Dan performed in a way I've never seen him before – the "emotional" parts were a total surprise. His songwriting hit levels I've never seen – levels of connectedness, compassion, understanding, as well as the ability to make me laugh and cry simultaneously. Dan is a major talent and makes me proud to be a fan of his. I hope and pray that he's not too worn out to play more shows. I'd like to go on another tour with him. If you're on the fence about seeing Dan because he's an "old-schooler" or

Q: Why is it important that the template functions in C++11 are virtual? I read somewhere that the template functions are virtual in c++11. If that is so, then why is it so, if template functions are just wrapper functions? A: You should read the paragraph where virtual is explicitly mentioned: A template function with the virtual specifier is treated as a polymorphic function. Moreover, a class derived from the class template is considered to be an abstract class and the functions of such classes are implicitly virtual (8.4/2). /* Copyright 2015 Brock Reeve * Licensed under the Apache License, Version 2.0 (the "License"); * you may not use this file except in compliance with the License. * You may obtain a copy of the License at * Unless required by applicable law or agreed to in writing, software * distributed under the License is distributed on an "AS IS" BASIS, * WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied. * See the License for the specific language governing permissions and * limitations under the License. */ using System; using System.Collections.Generic; using System.IO; using System.Linq; using System.Net; using System.Text; using Pickaxe.Sdk; namespace Pickaxe.Sdk.FlowVisibility { public class ResultsReader : ResultsReaderBase { private readonly string baseUrl; private readonly string filename; private readonly string routeName; private readonly CancellationTokenSource token; public ResultsReader(ICollection urls, string baseUrl, string filename, string routeName, string fileExtension, CancellationTokenSource token) { baseUrl = baseUrl.StartsWith(':')? baseUrl.Substring(1) : baseUrl
