Not to be confused with DAISY (Drawing Aided Information Storage and Exchange) of the former ADIS-s. Many third-party programs are used for AutoCAD customization and automation purposes. These include: AutoLISP is an extension of AutoCAD that allows users to write code using object-oriented programming in Lisp. Visual LISP is a tool that allows users to extend the functionality of AutoCAD through the use of AutoLISP, and is capable of supporting both 3D and 2D drawings. AutoCAD and AutoLISP were available as freeware for a limited time when they first came out. PowerLISP (an extension of AutoLISP) and Visual LISP were available as freeware for a limited time. They are no longer available in the AutoCAD store. Visual LISP is no longer available. AutoCAD's Visual LISP development environment and languages are not maintained by Autodesk. Visual LISP source code has been distributed in a semi-open-source license and some effort has been made to adapt it for use on other CAD systems. The Visual LISP engine and API are based on the JVCL, which was an open source project but has been replaced by the commercial .NET platform. Visual LISP is no longer available. The original Visual LISP engine and the Visual LISP DSL have been replaced by DAISY, the Direct Access Input System and DAISY language. The Visual LISP language has been replaced with DAISY Lua. There is a web based extension to Autocad in which you can create your own menus and toolbars. It's not really Autocad but instead a mash-up of other graphical applications. AutoCAD, in conjunction with AutoLISP, can read a variety of different image formats. CAD Wizards can be created to help non-programmers create very specific workflows. An existing workflow in AutoCAD is Schematic Capture, which converts a 2D drawing into a CAD database. It's just one of the curious facts about the 2016 presidential race that no one really knows what the fuck is going on. In one corner you have a guy who actually wants to be president of the United States, who will be the GOP nominee and who is already deploying a strategy that will make him the next president of the United States. And in the other corner you have a guy who wants to be president of the United States, who will be the Democratic nominee and who is doing everything he can to make sure he fails to become president of the United States. There are now only 89 days left before we get to decide who will be the next president of the United States. In the span of that time, Donald Trump has gone from someone who wanted to "make America great again," to someone who wants to "blow up the system," to someone who wants to "destroy" Obamacare, to someone who wants to "let Obamacare fail." To someone who wants to "drain the swamp," to someone who wants to "drain the swamp," to someone who wants to "clean up the corruption." To someone who wants to "let the voters decide," to someone who wants to "let Hillary decide." To someone who wants to "Make America First" and someone who wants to "Make America Second." To someone who wants to build a wall and someone who wants to take a "historic compromise." To someone who wants to have just "one more chance." To someone who's afraid of Hillary's email server and someone who's afraid of her health. To someone who's afraid of Hillary's health and someone who's not afraid of her health. And, of course, he's going to
