Q: MySQL Dump and Import I have installed MySQL 5.5.36. I am using a VM (macOS) and had to login as a root user to install. In the documentation, this page mentions: Include the user name and password, if required. Edit the dump file, which comes from the target machine. The dump file has size of about 12 MB. Since I am not logged as root, is there a way I can do the dump, or I can get it done remotely via a MySQL GUI? Thanks.

A: Assuming you're working in the same mysql prompt as root, you can just do: `mysql -u root -p` Then: `show databases;` then: `show databases;` exit And you should be in the prompt again. And to dump a database: `mysqldump -u root -p database_name > database_name.sql` Obviously, you'll have to make sure you change "database_name" to the database name you're dumping.

Thermo-optical (T.O.) modulators include a heater or thermal switch that can be electronically controlled to turn the T.O. switch on and off. A light coupling component, such as a laser diode, and a photodetector are coupled to the T.O. switch in order to detect the light passing through or reflected off of the T.O. switch. Thus, the T.O. switch can be used in a wide variety of applications to control the transmission or reflection of the light. Different T.O. switches have been suggested, including, for example, the five-state T.O. switch disclosed in U.
