Graf Bioworks: "Harmony in Bio-Hedia". Kunurmana: "Tataji tiba-tiba kecil ini! Ramadhan!" Meremah di Grass-Garden, Kota Gatot Subroto, Jakarta, 22 Maret 2014. Tiga-3. 268. Pasal 168.Q: In \mathbb{C} , a conjugate of a unitary matrix is again unitary (why?) The context is this: If u is a unitary matrix, then I need to show the conjugate of a unitary matrix is again unitary (if c is a complex number, then I need to show that u^c is unitary). It seems that I need to use the fact that $|u|=1$ so that $u^c = u^{\frac{c}{|c|}}$, but I don't see how I can. A: Firstly, $|u^c|=1$ since the absolute value is preserved under multiplication. So u^c is unitary (since it is conjugate to u). Before we start diving into the CSS of the Decorated Calendar, let's think about the overall design and how to accomplish it. We'll be building a calendar for October 2015 (I know, it's a two-month calendar), but this could easily be changed to any month without much trouble. First, we'll give each day a background color. For this case, we'll use a simple linear gradient starting at a darker background color (a light gray) and transitioning to a lighter color (white). Then, we'll assign a background-position property to each day, based on its position within the month. The CSS for this will be: `.day { background-color: #ddd; background-image: -webkit-linear-gradient(#a0c32e, #d3397f); background-image: linear-gradient(#a0c32e, #d3397f); }` In this CSS, we've given each day a background color, based on its position within the month. Position will need to be calculated based on the current month, and an element's position within a month
