Vector images are scalable and maintain their smooth outline quality, a characteristic of most vector-based systems. Illustrator programs (that is, the Adobe Illustrator and Adobe Illustrator Lightroom interfaces) and their accompanying programs for both Mac and Windows OS platforms (Adobe Illustrator Catalyst and Adobe Illustrator Creative Cloud) are particularly great tools for graphic designers, as they combine the greatest features of the two platforms. In this exercise, we will create a design using a brush. 1. Open the Brushes.psd file from the Wiley.com site. The Brushes.psd file includes brushes for your use in Photoshop. You may see other brushes that are not included with this book. 2. Double-click the Brush Tool tool (the default) to display the brush controls. 3. Click and drag over the area of your artwork where you want the image to start. Use the Eyedropper tool to sample the color of this area. This is the Color Sampler tool. The Color Sampler tool is used to sample a color from the area you are painting over. 4. Continue to click and drag over the area you want to include in the painting. Repeat the steps for each color you want in the finished image. It may be helpful to click the Brush Preview button (to the right of the Brush tool) to see an overlay of the sample colors. Brushes The most common brush in Photoshop is the Brush tool. It comes in three types: regular, size, and pattern. You can use the brush to either paint, erase, or mask pixels in an image. The size of the brush determines its diameter, or the area of the pixels it will remove or copy. If you need to erase a section of an image, you can use a brush with a small size. Likewise, if you want to paint out an object, use a brush that has a larger size. If you need to mask out some of an image, use a brush that's the same size as the area you want to keep in place. The pattern brush allows you to use color and brightness to paint the brush pattern itself. Instead of painting the pixels that make up an object, you can use a pattern brush to make irregular shapes. **Pen tools** The pen tools do the same thing as the brushes: they can paint, erase, and mask pixels. The brush and pen tools have different functions. The brush is for painting, whereas the pen is for drawing shapes and lines. The brush tool is also for cutting shapes out of layers. The pen tool has four types of functions: regular, gradient,

blur, and pen. The pen has eight different types of pens: black, white, black with a stroke, white with a stroke, black with gradient, white with gradient, black and white with gradient and fade.
